

MAS: Software to Simplify and Automate Your Database Management

A cost-effective solution for database performance, administration, compliance, and security.

MAS database automation software increases productivity, decreases costs, and completes standardization across various databases for your organization. With MAS, you're able to manage your IT environment through a singular, intuitive interface. Simplify business management needs and maximize your processes, servers, and IT workforce.

Why Vendita

- ✓ View multiple databases through a single, intuitive interface
- ✓ Database agnostic, supporting Oracle, MySQL, Maria DB, Postgres and SQLserver
- ✓ Safety assured with passwords in accordance with industry standards
- ✓ Establish company standards for how hardware and software is managed
- ✓ Lower IT costs and reduce staff needs through increased efficiency and productivity
- ✓ Automate and monitor compliance to avoid unexpected software licensing fees

MAS can scale and deliver significant performance during or after a peak in workload. Your team can reduce time-wasting, manual tasks by automating systems and processes. Utilize email notifications for when the process begins, completes, or fails. These notifications can be sent to a single user, multiple users, a group, or any combination of these, improving productivity for your entire team. Organize custom scripts for availability in all databases, and maintain logs for backup processes where needed.

Are you looking to integrate MAS as your database management software?

Vendita offers several options for your business to purchase MAS for your organization, including Universal Oracle Cloud credits.
